# THE ENERGY POLICY

## **In addition to our environmental policy, our energy policy is a high priority at Prettl.**

The entire energy consumption of the Prettl Group is recorded and analysed in our energy management system (EnMS). Energy consumption and energy efficiency play a vital role in this process. The main objective of our energy management department is to increase energy efficiency and lower energy consumption in way that is sustainable.

This objective is supported through the purchase of economical and energy efficient machines, systems and devices as well as by raising the awareness of our employees at all levels regarding sustainable energy consumption. From the standpoint of our influence capabilities and cost-effectiveness, we are creating and using regenerative energy whenever possible.

The development of the energy policy is reflected in our newly constructed production hall in Pfullingen, which was finished in 2011. The production hall uses our REFU technology to cover its power requirement using nearly 100% solar energy. Following this model, we are planning on generating energy supplies from largely renewable energies in our new production locations.

**For this reason, we want to encourage all of you, at all levels, to submit relevant comments and suggestions for improvements to energy saving and optimisation in our group.**

**This e-mail address is now available for that very purpose: [enms@prettl.com](mailto:enms@prettl.com).**

**All comments and suggestions for improvements that are received will be checked and answered by members of the energy management team.**

In addition to our obligation to comply with the legal and additional energy-related requirements, we are allowing our energy policy, which serves as the strategic foundation for our energy management system, to be inspected as part of our audits and management reviews.

As a result, we will be able to initiate the necessary updates in a timely manner.

We believe that raising awareness about the important role played by our energy management system is not the only important aspect in achieving sustainable improvement to our EnMS.

We also want to develop a corporate culture in which every single one of us can actively contribute suggestions for improvement, thereby inspiring each other to go the extra mile and make an impact.

Quality, environmental and energy policies are all implemented at Prettl in pursuit of our unified goal of continuous improvement for all stakeholders.

It is for this very reason that we at Prettl include all of our employees in the task of achieving this goal. This is the only way to create lasting values.

**"WE ARE DEDICATED TO  
CREATING LASTING  
VALUES."**
